SUMMARY

Enthusiastic final year Computer Engineering student looking to become a developer and acquire new programming languages. A fast learner, collaborative thinker, and organized person with a logical outlook. Self-motivated and centered around outcomes. I have a deep interest in cybersecurity, with a focus on learning about threat detection, risk management, and developing secure software systems.

PROFESSIONAL EXPERIENCE

NCAI March 2024 - July 2024

Full Stack Web Developer Intern

- Project: Advanced Driver Monitoring System

Developed expertise in Firebase, fetching real-time images from the database. Designed and implemented logic to analyze database content and display information dynamically in a table format.

GAO Tek Inc. (Remote) September 2024 - December 2024

WordPress Web Developer Intern

- Developed dynamic web pages using HTML, CSS, PHP, and JavaScript to enhance site functionality and user experience.
- Gained hands-on experience with WooCommerce, including implementing a mega menu to improve navigation on e-commerce pages.
- Utilized AJAX search techniques to display search results instantly, improving user engagement by minimizing page reloads.

SKILLS

- Programming Languages: Proficient in C, Python; strong understanding of Object-Oriented Programming (OOP) and Data Structures & Algorithms (DSA).
- Operating Systems: Experienced in working with Linux environments.
- Frontend Development: Skilled in HTML, CSS, JavaScript, React.js, and Tailwind CSS.
- Mobile Development: Hands-on experience with React Native and Expo for cross-platform apps.
- Collaboration Tools: Strong communicator and effective team player with proven ability in remote task coordination.

EDUCATION

- Bachelor of Computer and Information System Engineering: October 2022-present
NED University of Engineering and Technology
- Diploma in IT: April 2021 - September 2021
ICBT Campus, Sri Lanka

PROJECTS

- **Environmental Monitoring System** - Developed an integrated monitoring system in C (Linux environment) using the OpenWeatherMap API. Processed temperature and humidity data, calculated averages, logged events, and generated email alerts for anomalies. Provided real-time weather insights for anomaly detection and alerting.
- **Complaint App** - Developed a mobile application for emergency complaints using React Native (Expo). Designed the UI and integrated Firebase to log and store complaint data.

- **Hospital Management System** - Built an online platform to book doctor appointments at the cheapest available hospital. Implemented using React Native, Firebase, and Tailwind CSS.
- **Movie Recommendation System** - Created a recommender system using NLP (Bag of Words), ML, and cosine similarity to suggest similar movies. Integrated Streamlit for the interface and TMDb API to fetch posters, enhancing user engagement.
- **Air Quality Monitoring System** - Designed an IoT-based system to monitor temperature, humidity, and smoke levels in real time. Sent sensor data to the cloud for remote monitoring and visualization through a web dashboard.
- **Simple LAN Chat Application** - Built a real-time chat application in Python with text messaging, image sharing, and multi-client support. Enabled communication over a local area network (LAN) using socket programming.

CERTIFICATIONS

- CC certified Cybersecurity (ISC2)
- Web Designing for Beginners - CODL University of Moratuwa Sri Lanka
- Python for Beginners - CODL University of Moratuwa Sri Lanka
